

16000W solar light

Overview

How do solar outdoor lights work?

All solar outdoor lights draw power from the sun during daylight hours and store that power in a battery, or batteries, housed inside the lights. When the sun sets, the lights draw on the batteries to produce light. Some models come on automatically at dusk, while others can or must be turned on manually.

What is a solar landscape light?

Solar landscape lights: These lights—also called spotlights, path lights, or walkway lights—are typically installed in loose soil using an included plastic stake and are meant to illuminate walkways, garden beds, or a patio's perimeter. Solar deck lights: These lights come in two common varieties.

What are solar deck lights?

Solar deck lights: These lights come in two common varieties. The first is designed to be installed on stair risers, casting light to illuminate the step below so that people won't trip. The second variety, often called post-cap lights, is typically mounted on top of the posts in deck handrails and railings.
