

# Are lithium batteries in battery cabinets safe

## Overview

---

Lithium-ion batteries should never be treated as simple workplace items. They are classified as Class 9 Miscellaneous Dangerous Goods, meaning they pose hazards that require specific controls.

Lithium-ion batteries should never be treated as simple workplace items. They are classified as Class 9 Miscellaneous Dangerous Goods, meaning they pose hazards that require specific controls.

Lithium ion battery storage cabinets have become an essential safety control as lithium-ion batteries are now embedded in everyday business operations. From mobile phones and drones to forklifts, industrial robots, solar systems, and automated equipment, lithium-ion batteries power modern.

Lithium-ion batteries can become hazardous when stored incorrectly. Improper handling often leads to overheating, fires, and even explosions. Reports show that 19% of businesses have experienced fires caused by these batteries, while 54% have faced incidents like smoking or overheating. Thermal.

With the rising use of lithium-ion batteries in industries such as manufacturing, construction, and renewable energy, the need for safe storage solutions has never been greater. Mishandling these batteries can lead to hazardous situations, including fires, explosions, and toxic leaks. This is why.

Safety cabinets, also referred to as flammable storage cabinets or chemical cabinets, are designed for storing flammable liquids. They comply with EN 14470-1, and are intended to protect the contents from fire from the outside. This works well for chemicals, but not for lithium-ion batteries. Some.
