

Clean solar energy for power plants in Türkiye

Overview

With abundant solar resources across its territory, Türkiye has a unique opportunity to close this gap and accelerate its clean energy transition. The government's recent YEKA tenders mark a decisive step forward allocating 850 MW of new solar capacity through nine projects.

With abundant solar resources across its territory, Türkiye has a unique opportunity to close this gap and accelerate its clean energy transition. The government's recent YEKA tenders mark a decisive step forward allocating 850 MW of new solar capacity through nine projects.

Türkiye has doubled its solar capacity in just 2.5 years, surpassing its current target more than a year ahead of schedule. The progress underlines the opportunity for an upgraded target in its upcoming Nationally Determined Contribution. This study examines the recent development of solar and wind.

The rise of distributed renewable energy (DRE) technologies, like solar panels on rooftops and small solar farms, is creating new opportunities that weren't possible ten years ago. These small-scale, flexible energy systems complement traditional large power plants, making power systems stronger.

Türkiye's Energy and Natural Resources Ministry has awarded 650 megawatts (MW) of new solar capacity under the country's Renewable Energy Resource Zones (YEKA) program, in a round of tenders expected to unlock approximately \$400 million in investment, Minister Alparslan Bayraktar announced.

Türkiye's solar power plant installation continues to increase every year on its way to becoming an energy center. This digitally modified photograph acknowledges and celebrates this development and transition in Türkiye. Türkiye's photovoltaic (PV) sector has shown significant growth over the past.

Demand for solar energy in Türkiye is rising rapidly, but the country's current installed capacity of 23 GW still falls short of meeting its growing energy needs. With abundant solar resources across its territory, Türkiye has a unique opportunity to close this gap and accelerate its clean energy.

As the world transitions toward clean energy, Türkiye emerges as a key exporter of

renewable energy technologies. With strategic manufacturing capabilities, competitive pricing, and a logistics network bridging Asia and Europe, Türkiye now plays a pivotal role in the export of solar panels, wind.

Clean solar energy for power plants in Türkiye

New solar power plant tenders bring \$400M in investment to Türkiye

Türkiye's Energy and Natural Resources Ministry has awarded 650 megawatts (MW) of new solar capacity under the country's Renewable Energy Resource Zones (YEKA) ...

[Solar power and Turkey's clean energy transition](#)

Over the past decade, Türkiye has more than tripled its renewable energy production, has announced an ambitious objective of adding an additional 60GW of wind and ...

[Renewable Energy Manufacturing in Türkiye Explained](#)

With strategic manufacturing capabilities, competitive pricing, and a logistics network bridging Asia and Europe, Türkiye now plays a pivotal role in the export of solar ...

[Türkiye advances renewable push, opens new ...](#)

Türkiye on Wednesday put into operation new solar and wind energy plants through a mass inauguration ceremony attended by President

Recep ...

Türkiye's solar capacity doubles, beating 2025 targets: Report

Türkiye doubled its solar power capacity to over 19 gigawatts in just two and a half years, beating its 2025 target by August 2024, a new report said on Tuesday. This ...

Türkiye

With this regulation, floating solar power plant applications are expected to increase in Türkiye in the coming years. Thus, in addition to increasing renewable energy capacity, it is aimed to ...

[Solar power and Turkey's clean energy transition](#)

Over the past decade, Türkiye has more than tripled its renewable energy production, has announced an ambitious objective of ...

Türkiye surpasses 2025 solar target as capacity doubles in 2.5 ...

This study examines the recent development of solar and wind energy capacities in Türkiye in the context of current renewable energy targets and strategies.

Clean energy transition in the Turkish power sector: A techno ...

A large-scale generation-expansion power-system model (TR-Power) with a high temporal resolution (hours) is developed for the Turkish power generation sector. Several ...

Türkiye advances renewable push, opens new solar, wind plants

Türkiye on Wednesday put into operation new solar and wind energy plants through a mass inauguration ceremony attended by President Recep Tayyip Erdoğan, who ...

Türkiye , Ember

Under ambitious targets in place for 2035, wind and solar could grow to provide half of Türkiye's power. The focus should now be on removing barriers to growth to scale up ...

How Floating Solar Could Redefine Türkiye's Clean Energy Future

With abundant solar resources across its territory, Türkiye has a unique opportunity to close this gap and accelerate its clean energy transition. The government's ...
