Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved.

These steel-clad marvels are becoming the backbone of modern power grids, especially with China's GB/T 20663-2017 standard setting the benchmark for safety and performance [2]. As of March 2025, over 38GW of energy storage systems now operate under updated national standards, making this.
