A genset is a portable diesel-powered generator that supplies electricity to a reefer container during transport. It ensures that the container's cooling system stays active when external power sources are unavailable-keeping perishable goods at the correct temperature throughout the journey.

Each generator set manufacturer offers different cooling system design options. The two most common types are closed-loop and open-loop systems. Closed-loop systems incorporate pumps, fans, and radiators located on a skid, creating an all-in-one unit, with container and trailer options also.

A commercial generator for your 20ft or 40ft refrigerated shipping container will give you the protection and peace of mind you need. But how do you know which one to pick?

We'll discuss the important factors you need to consider whether you rent or buy a generator for your reefer containers. What.

Genset machines are purpose-built to power reefer containers and have the following features to help users: Gensets are powered by diesel or alternative fuels to generate electricity for the reefer container's cooling system. High-efficiency gensets maximize fuel usage while minimizing emissions.

These refrigerated containers need a source of electricity called gensets to function throughout their transportation be it on a vessel, at the terminal, or overland. When refrigeration is necessary during transportation one needs a genset. What is a genset?

A genset or a generator set is a power.

Thermo King's generator set (genset) range provides the vital, independent power supply needed to maintain the cold chain in global container refrigeration. They provide dependable power after your marine containers are unloaded and unplugged from the ship, ready to continue their journey on the.
