Electric vehicle (EV) power inverters are in charge of converting the direct current (DC) energy stored in the battery into alternating current (AC) energy that may be utilized to power the motor of the vehicle. For businesses hoping to take advantage of the rising demand for electric vehicles.

Hybrids (HEVs) and Plug-in Hybrids (PHEVs) have an internal combustion engine (ICE), but auxiliary systems in these architectures can be more efficient running from the high-voltage battery, rather than the engine belt. While the voltage levels may be different for the design, mild hybrids (MHEVs).
