This paper focuses on the optimization of the cooling performance of liquid-cooling systems for large-capacity energy storage battery modules.

GSL Energy is a leading provider of green energy solutions, specializing in high-performance battery storage systems. Our liquid cooling storage solutions, including GSL-BESS80K261kWh, GSL-BESS418kWh, and 372kWh systems, can expand up to 5MWh, catering to microgrids, power plants, industrial parks.

Therefore, the liquid-cooled thermal management system with high heat dissipation efficiency has become an important support for the development of energy storage technology and a hot topic in both commercial and research fields. This paper focuses on the optimization of the cooling performance of.

Considering factors like cost-effectiveness, safety, lifespan, and industry maturity, lithium iron phosphate (LiFePO₄) batteries are the most suitable for energy storage today. For thermal power auxiliary frequency regulation, the energy storage system requires batteries with high discharge rates.

Boost System Performance: Batteries operate best within an optimal temperature range, enabling higher energy density and more efficient charging and discharging. **Reduce Safety Risks:** Excess heat can trigger thermal runaway—a hazardous chain reaction that may cause cell failure or fire. **Effective.**
