

Energy company uses solar-powered containers for bidirectional charging

Overview

Enphase, known for developing and deploying high-quality solar system inverters, battery energy storage, and EV chargers, plans to deploy their bidirectional chargers in 2025. Last year, solar energy accounted for 64% of new capacity added to the electric grid.

Paired with bidirectional charging capabilities, EV-based storage can support the optimal use of residential renewables like solar. In addition to the scale of storage capacity available, bidirectional charging is highly versatile, supporting high-value use cases including: Automakers like Toyota.

Bidirectional charging allows an electric vehicle not only to draw energy from the utility grid but also to feed surplus power back into it—and even supply electricity to your home. It's common knowledge that bidirectional charging has long been hailed as a breakthrough in energy technology. But is.

Enphase, known for developing and deploying high-quality solar system inverters, battery energy storage, and EV chargers, plans to deploy their bidirectional chargers in 2025. Last year, solar energy accounted for 64% of new capacity added to the electric grid. All that power comes from clean.

Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure. A bidirectional EV can receive energy (charge) from electric vehicle supply equipment (EVSE) and provide energy to an external.

Solving the UK's battery storage conundrum?

A car park full of Tesla electric vehicles. Video: DriVe2X. Video: DriVe2X. A 'bidirectional charging' EV trial is under way that, in years to come, could help solve the UK's energy conundrum.

It's the reality of bidirectional EV charging, a game-changing technology that allows electricity to flow both ways: into your car to charge it, and back out to power your home or even send power to the grid. As energy costs rise and power outages become more frequent, this technology transforms.
