In this article, PF Nexus recognises the contributions being made to the energy transition by the Top 10 energy infrastructure companies in Oceania. Oceania's renewable energy landscape is rapidly evolving, with many countries setting ambitious goals to reduce their dependence on fossil fuels.

However, Australia, the largest country in the region, is still recording high per capita emissions, with 14.5tCO₂e per person in 2023, and has not committed to a coal phase-out timeline. This statistic leads to doubts over the deliverability of the region's decarbonization journey and overall.

This category has the following 4 subcategories, out of 4 total.

Oceania's increase in renewable power capacity share over the past decade on the surface shows an effort to achieve net zero, however, fossil fuels still account for over half its power generation share showing that Oceania is still overly reliant on the latter. Technologies such as solar, wind.

Organizations in this hub have their headquarters located in Oceania; notable events and people located in Oceania are also included. This list of companies and startups in Oceania in the renewable energy space provides data on their funding history, investment activities, and acquisition trends.
