Solar cells, also known as photovoltaic cells (PV cells), produce between 0.5V and 0.6V, or V_{OC}, at 77°F or 25°C. They typically have a power output of around 20%, meaning they can generate up to 400 watts of electricity. In ideal situations, a common small 10W solar panel can produce between 40.

The power output of a mini solar panel depends on several factors, including: Panel Size: The surface area of the solar panel directly impacts its ability to capture sunlight. Mini panels typically range from 1 watt to 100 watts, with the larger ones capable of generating more power. Efficiency of.
