

Indoor base station and outdoor base station

Overview

An indoor substation is one in which the entire substation is built inside a building, whereas an outdoor substation is a substation in which the equipment are installed in an open environment. Read this article to understand all the important differences between indoor and.

An indoor substation is one in which the entire substation is built inside a building, whereas an outdoor substation is a substation in which the equipment are installed in an open environment. Read this article to understand all the important differences between indoor and.

When planning a power distribution system, the choice between an indoor substation and an outdoor substation is crucial. These two types serve the same function—stepping down voltage and distributing electricity—but their setup, cost, and applications vary greatly. At Wei Shoe Elec, I've worked.

An indoor substation is one in which the entire substation is built inside a building, whereas an outdoor substation is a substation in which the equipment are installed in an open environment.
