tions that apply to batteries as well as other hazardous materials. Helpful links to these regulations are provided below. In addition the Federal Aviation Administration (FAA) (another sub-agency of the U.S. R Subchapter 72.102 - Special Provisions 130 and 340 applicable to dry cell batteries and.

Nickel Cadmium batteries are often used in portable electronics and flashlights. These batteries must be recycled, and they do have special packing and shipping requirements. Dry cell nickel-cadmium batteries that are higher than 9-volt must be packed so that the terminals do not touch each other.

(a) Electric storage batteries, containing electrolyte acid or alkaline corrosive battery fluid (wet batteries), may not be packed with other materials except as provided in paragraphs (g) and (h) of this section and in §§ 173.220 and 173.222; and any battery or battery-powered device must be.

Nickel-metal hydride (NiMH) batteries are rechargeable batteries often used in portable electronics and tools. They offer a higher energy density than alkaline batteries, meaning they can store more energy in the same space. NiMH batteries are known for their long cycle life and relatively low.

This overview examines key logistical factors for transporting major battery technologies, including lead-acid, lithium-ion, nickel-cadmium, nickel-metal hydride, alkaline, and button cell batteries. Lead-acid batteries fall in the UN class 8 (corrosive) and hold the HS code 8507.10 for lead-acid.

In order to safely and legally ship NiCd batteries, it is crucial to stay informed

about the specific guidelines and restrictions that apply to these types of batteries. NiCd batteries, also known as Nickel-Cadmium batteries, are commonly used in a wide range of devices, from handheld electronics.
