

Japan Osaka solar Module Project Electrical

Overview

Solar power in Japan has been expanding since the late 1990s. Japan is a large installer of domestic , with most of them grid connected. The country was a major manufacturer and exporter of photovoltaics (PV), with a global market share of around 50% in the early 2000s. However, by 2019, this had dropped to below 1% due to the rise of state-backed production in China.

The SBSP project involves the space launch of satellites equipped with giant solar panels measuring 2 km², converting the generated electricity into microwaves that are then transmitted wirelessly to the ground.

The SBSP project involves the space launch of satellites equipped with giant solar panels measuring 2 km², converting the generated electricity into microwaves that are then transmitted wirelessly to the ground.

Sojitz has signed a 20-year corporate power purchase agreement (PPA) with Kansai Electric Power and Osaka Titanium Technologies to deliver solar energy from hundreds of distributed-generation sites. Japan's Sojitz Corp. has signed a 20-year corporate PPA with Kansai Electric Power (Kepco) and Osaka.

Osaka Titanium Technologies signed a 20-year off-site PPA with Sojitz and Kansai Electric Power, the companies announced on June 4, 2025. Under the PPA, Sojitz and its wholly-owned subsidiary Sojitz Mirai Power will develop about 200 low-voltage solar plants totaling 10MWAC/20MWDC, and commission.

The Sunshine Project (1973–1992) explored the potential of solar power, geothermal power, liquefied coal, and hydrogen as primary energy sources. In 1992, during the early years of commercial PV installation, Japan accounted for 27.8% of global PV production, and by 2004, this had risen to 50.4%.

Japan is spearheading the development of two promising technologies to make optimal use of both the Earth and space and fully harness the Sun's power as electricity: space-based solar power and next-generation flexible solar cells. Left: Diagram of a space-based solar power (SBSP). An antenna.

Sonnedix Japan has brought online just under 500MW of solar PV in the country. Image: Sonnedix. Utility Osaka Gas and developer Sonnedix are installing a battery energy storage system (BESS) at the latter's 38.7MW Oita solar project, which Osaka Gas described as the largest battery storage facility.

In January 2024, a floating solar power plant sited on an agricultural reservoir at Gohnoike in Izumisano City, Osaka Prefecture, came on stream. The electricity generated is distributed through Izumisano Power Company's transmission lines to power public facilities in Izumisano City. Sumitomo.
