Luis Stone, CEO and Founder, ErgoSolar, announced a US\$10 million investment to establish Mexico's first lithium and sodium battery factory, with potential locations being Puebla or Jalisco. This initiative represents a pivotal development for Mexico's lithium industry, which had experienced.

countries with the highest solar radiation potential. Its geographic location is suited for building batteries suited for electromobility. These developments are key to reducing dependence on fossil and geothermal fields—primary sources of lithium. Global demand for this mineral is rising rapidly, driven by the expansion.

Edilso Reguera, a researcher at the Center for Research in Applied Science and Advanced Technology (Cicata) of Mexico's public National Polytechnic Institute, displays an X-ray diffractometer used to study the structure of materials for electric batteries designed to store and recharge energy.

A month after India introduced an energy storage mandate for renewable energy plants and China scrapped its own, Mexico has stepped forward with an ambitious 30% capacity requirement, alongside plans to add a further 574 MW of batteries by 2028. Future wind and solar energy projects in Mexico will.

Home » Media » News » The Lithium Center project in Mexico is a strategic leap towards clean energy Did you know that lithium is considered the “white gold” of the energy transition?

As the world moves toward clean technologies and electric mobility, Mexico is preparing to take a strategic leap.

Mexico has taken a bold step in reshaping its renewable energy sector by

mandating that all new wind and solar projects include battery storage equal to 30% of their capacity. This move, announced by Jorge Islas, Undersecretary for Planning and Energy Transition, aligns Mexico with global efforts.
