In 2019, New York passed the nation-leading Climate Leadership and Community Protection Act (Climate Act), which codified aggressive climate and energy goals, including the deployment of 1,500 MW of energy storage by 2025, and 3,000 MW by 2030. Over \$350 million in New York State incentives have.

Against the backdrop of the rapid development of new energy storage systems, the corrosion resistance and structural reliability of BESS containers, as the core carrier, directly affect the operational efficiency of the energy storage system throughout its entire lifecycle. Through high weather.

Anti-corrosion measures for energy storage containers gy storage system and even lead to a serious leakage. This paper analyzes the corrosion mechanism of common metals, summarizes the corrosion research status of phase change materials, and summarizes several common corrosion protection methods.
