

# North America Northwest Liquid Flow Energy Storage Project

## Overview

---

The design provides a pathway to a safe, economical, water-based, flow battery made with Earth-abundant materials. It provides another pathway in the quest to incorporate intermittent energy sources such as wind and solar energy into the nation's electric grid.

The design provides a pathway to a safe, economical, water-based, flow battery made with Earth-abundant materials. It provides another pathway in the quest to incorporate intermittent energy sources such as wind and solar energy into the nation's electric grid.

A new recipe provides a pathway to a safe, economical, water-based, flow battery made with Earth-abundant materials RICHLAND, Wash.— A commonplace chemical used in water treatment facilities has been repurposed for large-scale energy storage in a new battery design by researchers at the Department.

Researchers at the Department of Energy's Pacific Northwest National Laboratory (PNNL) have developed a new large-scale energy storage battery design featuring a commonplace chemical used in water treatment facilities. The new recipe provides a pathway to creating safe, economical, and water-based.

This technology strategy assessment on flow batteries, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative. The objective of SI 2030 is to develop specific and quantifiable research, development, and deployment (RD&D).

Over the last several decades, PNNL has seized the energy storage challenge and, in collaboration with stakeholders and research partners, is modernizing energy storage solutions to enable U.S. dominance in the global energy market. Energy storage can address crosscutting challenges in grid and.

A new research centre 'uniquely equipped' to evaluate energy storage technologies has opened at Pacific Northwest National Laboratory (PNNL) in Washington, US. PNNL, one of the US Department of Energy's (DOE) 17 National Laboratories, welcomed dignitaries, including Washington Senator Maria.

A commonplace chemical used in water treatment facilities has been repurposed

for large-scale energy storage in a new battery design by researchers at the Department of Energy's Pacific Northwest National Laboratory. The design provides a pathway to a safe, economical, water-based, flow battery.

## North America Northwest Liquid Flow Energy Storage Project

### [North America Flow Battery Market: Powering Grid Innovation](#)

Our research team combines extensive experience analyzing flow battery deployments, utility-scale energy storage projects, and regulatory frameworks across the United States and Canada.

### [New all-liquid iron flow battery for grid energy storage](#)

A new iron-based aqueous flow battery shows promise for grid energy storage applications.

### **PNNL Researchers Develop All-Liquid Iron Flow Batteries for ...**

Researchers at the Department of Energy's Pacific Northwest National Laboratory (PNNL) have developed a new large-scale energy storage battery design featuring a ...

### **From The DOE's Pacific Northwest National Laboratory: "New All ...**

A commonplace chemical used in water treatment facilities has been repurposed for large-scale energy storage in a new battery design by

researchers at the Department of ...

## Technology Strategy Assessment

China's first megawatt iron-chromium flow battery energy storage demonstration project, which can store 6,000 kWh of electricity for 6 hours, was successfully tested and was ...

## PNNL opens US DOE energy storage research facility, long ...

A new research centre 'uniquely equipped' to evaluate energy storage technologies has opened at Pacific Northwest National Laboratory (PNNL) in Washington, US.

## [PNNL creates record-breaking flow battery for grid ...](#)

On July 10, the Department of Energy's Pacific Northwest National Laboratory (PNNL) announced that researchers had developed ...

## **PNNL creates record-breaking flow battery for grid energy storage**

On July 10, the Department of Energy's Pacific Northwest National Laboratory (PNNL) announced that researchers had developed a record-setting flow battery that ...
