

# On-site energy like solar energy

## Overview

---

Onsite energy encompasses a broad range of technologies that are suitable to serve large energy loads, including battery storage, combined heat and power, district energy, fuel cells, geothermal, industrial heat pumps, renewable fuels, solar photovoltaics, solar .

Onsite energy encompasses a broad range of technologies that are suitable to serve large energy loads, including battery storage, combined heat and power, district energy, fuel cells, geothermal, industrial heat pumps, renewable fuels, solar photovoltaics, solar .

The U.S. Department of Energy's (DOE) Onsite Energy Technical Assistance Partnerships (TAPs) help American industrial and other large energy users lower costs, install onsite energy technologies, and increase resilience, security and energy independence. What Is Onsite Energy?

Onsite energy refers.

Reduce utility costs, achieve energy independence and meet your sustainability goals by generating your own on-site power—and even selling surplus energy back to the grid. Controlling your own energy supply means more predictable and reliable energy generation that lowers costs and environmental.
