

# Peak-valley arbitrage of Ghanaian solar container energy storage system

## Overview

---

What is Peak-Valley price arbitrage?

1. Peak-Valley Price Arbitrage Peak-valley electricity price differentials remain the core revenue driver for industrial energy storage systems. By charging during off-peak periods (low rates) and discharging during peak hours (high rates), businesses achieve direct cost savings. Key Considerations:.

What are the benefits of price arbitrage for energy storage?

The benefit of price arbitrage for energy storage is based on storing energy at low-price periods and releasing at high-price periods, where the income results from the price difference.

How do price differences influence arbitrage by energy storage?

Price differences due to demand variations enable arbitrage by energy storage. Maximum daily revenue through arbitrage varies with roundtrip efficiency. Revenue of arbitrage is compared to cost of energy for various storage technologies. Breakeven cost of storage is firstly calculated with different loan periods.

What are arbitrage revenue and storage technology costs?

Arbitrage revenue and storage technology costs for various loan periods as a function of storage capacity for (a) Li-ion batteries, (b) Compressed Air Energy Storage, and (c) Pumped Hydro Storage. Fig. 11 c shows the current cost of PHS per day and the arbitrage revenue with round trip efficiency of 80%.
