

Portable mobile power communication BESS

Overview

Do mobile Bess applications have communication interfaces?

This thesis project, carried out at Northvolt Systems, aims to analyze the existing and readily used communication interfaces for a specific set of mobile BESS applications. The analysis is performed by a literature review of typical mobile BESS applications with the identified corresponding communication interfaces.

What applications can a mobile Bess support?

The project aims to perform a thorough analysis of the various communication interfaces applicable to the applications that a mobile BESS can help support, of which, some typical VMS applications are construction sites, festivals, and EV charging stations.

How much power does a Bess have?

The system is built of two main blocks. The PCS building block, responsible for the main control of the mobile BESS. The nominal power rating of the PCS block is 225 kVA, with a maximum peak power in the peak shaving mode of 275 kW . The second block is the modular battery pack.

What is a typical mobile Bess application?

Another typical mobile BESS application is microgrid operations. Which could be at remote locations on or ofgrid depending on operation and grid availability. Typical usages are at construction sites or event/festival areas where grid connections may be severely inadequate or underdimensioned for the usage needed.

Portable mobile power communication BESS

Power Up Connect takes BESS mobile

The dual-axle, full-sized charging trailer is capable of charging 60+ cell phone devices, multiple wheelchairs, two-way radios, portable battery packs and other applications ...

[BCH Series Mobile BESS Charger -MPMC POWERTECH CORP.](#)

This mobile power hub delivers immediate, high-capacity charging where fixed infrastructure is absent or impractical. It is ideally suited for supporting logistics fleets on highways, providing ...
