Probability in Maths

In this section, you will explore the fundamental concepts of probability, key formulas, conditional probability, and Bayes' Theorem. By the end, you'll have a clear ...

Probability

Probability is all about how likely is an event to happen. For a random experiment with sample space S , the probability of happening of an event A is calculated by the probability formula $n \dots$

Probability -

Probability is the branch of mathematics that studies the possible outcomes of given events together with the outcomes' relative likelihoods and distributions.

Probability

The probability is a number between 0 and 1; the larger the probability, the more likely the desired outcome is to occur. For example, tossing a coin twice will yield "head-head", "head-tail", "tail ...

Seeing Theory

The probability of an event is a number indicating how likely that event will occur. This number is always between 0 and 1, where 0 indicates impossibility and 1 indicates certainty.

7.5: Basic Concepts of Probability

We do that by assigning a number to each event (E) called the probability of that event ($P(E)$). The probability of an event is a number between 0 and 1 (inclusive). If the ...

A Probability of 0 means an event is impossible, while a probability of 1 means it is certain. It covers fundamental concepts, formulas, and theorems to analyse outcomes in daily ...

Probability

How likely something is to happen. Many events can't be predicted with total certainty. The best we can say is how likely they are to happen, using the idea of probability. When a coin is ...
