

Serbia s lithium batteries for energy storage are safe and reliable

Overview

As Serbia accelerates the growth of its renewable-energy sector, an uncomfortable truth is becoming visible: wind and solar alone cannot deliver a stable, reliable and flexible power system. The grid absorbs what it can, but its structural limitations are becoming clearer with.

As Serbia accelerates the growth of its renewable-energy sector, an uncomfortable truth is becoming visible: wind and solar alone cannot deliver a stable, reliable and flexible power system. The grid absorbs what it can, but its structural limitations are becoming clearer with each new project.

Belgrade (AFP) – The European Union and Serbia signed a deal Friday to develop the supply of lithium batteries that are seen as a crucial building block needed to power Europe's transition to a green economy. The memorandum of understanding inked during a "critical raw materials summit" in Belgrade.

On July 19, Serbia and the European Union formalized a strategic partnership on critical raw materials, with German Chancellor Olaf Scholz witnessing the agreement. The partnership centers on Serbia's lithium reserves, essential for producing batteries for German electric vehicles. The deal is.

The EU's primary reason for wanting Serbian lithium is tightly related to its determination to decrease its dependence on Chinese lithium, compete with rising Chinese electric vehicle manufacturers, and make sure the EU can reach its own time-sensitive goals of the European Green Deal by 2030 and.

Serbia and the EU announced a major deal June 19 to develop a joint lithium mining project. The deal offered the EU a crucial ingredient for producing electric batteries, an essential building block for the continent's green transition, and also had the potential to reduce the EU's dependence on.

Europe's transformation into a battery-centered industrial economy has been

faster and more disruptive than any other modern materials shift. The continent's commitment to electric mobility, grid-scale storage, renewable-energy balancing, and electrified industry has created unprecedented demand.
