

# Solar inverter export profit

## Overview

---

For the cumulative period from January to November, the total export value of solar and energy storage inverters reached \$9.36 billion, representing a substantial 17.6% year-on-year increase. The export volume for the same period was 47,830,000 units, showing a 7% year-on-year growth.

For the cumulative period from January to November, the total export value of solar and energy storage inverters reached \$9.36 billion, representing a substantial 17.6% year-on-year increase. The export volume for the same period was 47,830,000 units, showing a 7% year-on-year growth.

According to observations from Huaxia Energy Network, the profitability of the inverter sector has generally decreased in 2024, with five out of the eight major inverter companies experiencing significant declines in profits. Notably, only GoodWe reported a loss, while the overall inverter industry.

A solar inverter is a device designed to convert the energy generated by solar panels into usable electricity for residential or commercial use. It plays a crucial role in the solar power system by transforming the variable direct current (DC) power produced by solar panels into alternating.

Europe's inverter imports dipped 9.6% month-on-month in October 2024 to \$2.6 billion, reflecting seasonal demand weakness as winter reduced installation activities. Germany showed modest resilience with a 1.2% sequential increase in June 2024, while the Netherlands recorded 3.51% fewer component.

The global Photovoltaic (PV) Inverters market, valued at US\$12.1 Billion in 2024, is projected to reach US\$19.8 Billion by 2030, with a CAGR of 8.4%. Key growth drivers include advances in inverter technology, residential and commercial solar adoption, and integration with smart grid and energy.

According to data from the General Administration of China Customs, the number of exported solar inverters in November surged to 3,803,000, marking a substantial 22% increase compared to the previous month. This noteworthy month-on-month growth signals effective inventory utilization in the.

The global PV inverter market was valued at USD 34.6 billion in 2024 and is

estimated to grow at a CAGR of 9.5% from 2025 to 2034. The paradigm shift toward the integration of renewable energy resources will fuel the adoption of efficient systems. Photovoltaic inverters in the last decade have.
