Spain has launched an ambitious €700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems. The goal is to improve how Spain uses renewable energy.

As we make our way through 2024, Spain finds itself navigating an important energy transition phase with lots of opportunities to build more energy storage systems, resolve supply chain issues, and phase out fossil fuels. These three priorities reflect the views of business leaders across Europe.

Battery Energy Storage Systems (BESS) have emerged as a pivotal technology in the transition towards renewable energy, providing a reliable means to store and dispatch electricity. In Spain, the legislative framework governing BESS is evolving to support the growth of renewable energy sources.

European Commission approves new 700 million aid scheme to boost energy storage in Spain [News] The Ministry of Ecological Transition and Demographic Challenge will promote the large-scale deployment of this technology by co-financing investments of up to 85%. The European Commission has approved a.

Renewable energy will cover almost half of the world's electricity demand by 2030, according to the Renewables 2024 report by the International Energy Agency (IEA), thanks to strong growth and planned projects. Renewable generation is now joined by storage projects, and Spain occupies a prominent.

The Spanish government approved Royal Decree 7/2025 on June 24, resolving

several long-standing obstacles hindering the secure and lawful deployment of energy storage projects. This move responds to the large-scale blackout incident experienced by the country in April this year. The Spanish Battery.
