

# Strip solar panels

## Strip solar panels

---

### python

I was told it deletes whitespace but `s = "ss asdas vsadsafas asfasasgas"` `print(s.strip())` prints out `ss asdas vsadsafas asfasasgas` shouldn't it be ...

### String.strip() in Python

Without `strip ()`, `bananas` is present in the dictionary but with an empty string as value. With `strip ()`, this code will throw an exception because it strips the tab of the banana line.

### python

I want to eliminate all the whitespace from a string, on both ends, and in between words. I have this Python code: `def my_handle(self): sentence = ' hello apple '` `sentence.strip()` ...

### [Is there a better way to use strip\(\) on a list of strings?](#)

`list = map(str.strip, list)` This will apply the function `str.strip` to every element in list, return a new list, and store the result back in list.

## python

The method `strip ()` returns a copy of the string in which all chars have been stripped from the beginning and the end of the string (default whitespace characters). So, it trims whitespace ...

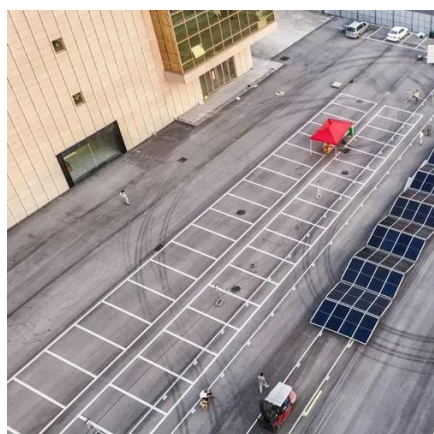

## string

`lstrip`, `rstrip` and `strip` remove characters from the left, right and both ends of a string respectively. By default they remove whitespace characters (space, tabs, linebreaks, etc)

## [Difference between String trim \(\) and strip \(\) methods](#)

The `String.strip ()`, `String.stripLeading ()`, and `String.stripTrailing ()` methods trim white space [as determined by `Character.isWhiteSpace ()`] off either the front, back, or both front and back of ...

## Python strip with n

37 The strip() method removes whitespace by default, so there is no need to call it with parameters like 't' or 'n'. However, strings in Python are immutable and can't be modified, ...

## What is the purpose of readline ().strip ()?

The start is simple enough - it opens a file encyin.txt in read mode. It takes input - n & p - from the line, the .split() separating the two inputs. They are then classified as integers, ...

## Why would I use int( input().strip() ) instead of just int( input )

I know .strip() returns a copy of the string in which all chars have been stripped from the beginning and the end of the string. But I wonder why / if it is necessary.
