

Syria monitors uninterruptible power supply

Overview

Does Syria still have electricity?

Most Syrians still live in dimness. Syria's heavily damaged electrical grid and gas refineries cannot meet domestic demand, so the state rations power to just two hours of electricity a day. Omar Shaqrouq, Syria's new electricity minister, faces major challenges in providing power services to his war-ravaged country.

Why does Syria have a power shortage?

The destruction of electrical infrastructure and transmission lines has incapacitated more than 50 percent of Syria's electrical grid. Compounding the problem is the severe shortage of gas and fuel required to operate power plants.

What happened to Syria's power infrastructure?

Much of Syria's power infrastructure, including its electrical grid and gas refineries, were destroyed during years of civil war. Although Syria once produced enough petroleum to be a fuel-exporting powerhouse, tough international sanctions have prevented its export since 2011.

Will Syria bring back electricity 24 hours a day?

Interim Electricity Minister Omar Shaqrouq admitted in a news conference that bringing back electricity to Syrian homes 24 hours a day is not on the horizon. "It will soon be four hours, but maybe some more in the coming days."
