

# The cost of a power storage station

## Overview

---

How much does a portable power station cost?

A typical price for a Portable Power Station is \$1,367 but can range from approximately \$59 to \$8,015. Stay charged during outdoor adventures or power outages with portable power stations from Lowe's. Browse our wide selection and power up with ease today.

Why do you need a battery energy storage system?

Battery energy storage systems also help to balance the electricity network, providing necessary backup during power outages from severe weather events or accidents. This can prevent the need for more expensive upgrades to the power system, which helps keep electricity costs down over time.

Are battery storage costs based on long-term planning models?

Battery storage costs have evolved rapidly over the past several years, necessitating an update to storage cost projections used in long-term planning models and other activities. This work documents the development of these projections, which are based on recent publications of storage costs.

How much does a 4 hour battery system cost?

Figure ES-2 shows the overall capital cost for a 4-hour battery system based on those projections, with storage costs of \$245/kWh, \$326/kWh, and \$403/kWh in 2030 and \$159/kWh, \$226/kWh, and \$348/kWh in 2050.
