The global solar PV glass market was valued at USD 53.5 billion in 2024 and is estimated to grow at a CAGR of 7.9% from 2025 to 2034. The demand for solar PV glass is directly impacted by the notable increase in solar installations brought about by the global push for renewable energy sources.

Solar photovoltaic (PV) glass is a type of glass that converts solar energy into electricity using solar cells. It is installed on the roofs or façades of buildings to generate enough energy to power the entire structure. Solar cells are mounted between two glass panes with a specific resin filler.

As countries across the globe transition to greener alternatives, the utilization of

solar energy is gaining momentum. the U.S. Department of Energy, solar energy solutions accounted for about 3.3% of total electricity generation in the United States in 2022, with a significant increase projected in.
