A true sine wave inverter transforms battery power into the very same clean electricity your home system would normally employ, making sure your electronics function at peak. They are fully compatible with anything from computers to refrigerators and even important medical equipment—without.

Solar panels take power from the sun and turn it into DC output through a process known as the 'photovoltaic effect'. DC (direct current) is a single current which runs in one direction only, and which through solar panels will fluctuate a little and

slowly as the intensity of the sun's light.
